Service: Water Hauling

Looking for professional and cost-effective help with managing your fluids and waste transfer projects? SCE delivers comprehensive solutions for the safe cleanup, transfer and disposal of industrial fluids and waste for leading companies across the Marcellus region.

Water is an essential part of any Marcellus gas drilling operation. Horizontal gas wells require in excess of three million gallons of water for each fracturing event. The frac flowback and produced water must be transported to the appropriate treatment and disposal facilities. Our team has the size, scale, expertise and Marcellus experience to haul your water efficiently and safely. Whether hauling produced water to a treatment facility or delivering fresh water to the well site, our team has everything in place to make sure your water is where it needs to be, when it needs to be there.

The SCE Advantage

Our spotless health and safety record will allow you to rest easy knowing that you made the right choice when it comes to handling potentially hazardous or environmentally harmful water and chemicals. As you know safe, compliant water hauling becomes the legal responsibility of the transporting company once produced fluid leaves the gas well's holding system, but it is the gas company's responsibility to choose a competent hauling company. By allowing our team to handle all of your fluid transportation needs, you can be sure that it will be handled promptly, safely and efficiently.

Our team brings that same attention to detail and high level of quality to every service we perform. Our expertise covers everything from E&S inspections to water testing and analysis to pipeline construction and site restoration. By choosing our team to perform any of the other services we offer, we can leverage the in-depth site-specific knowledge we gain from performing a variety of services at your well sites.

Our team has been performing oil & gas services in Pennsylvania and New York for over 10 years, so you can be sure we know the land, the roads and the business.
