and Zero accidents in 2011, 2012, 2013, 2014,
and 2015.

Service: Emergency Response

In the case of an emergency, having a competent, efficient and effective environmental services company on-call is not just important, it's a necessity. SCE's Emergency Response Service offers a rapid and effective response to spills of fracking fluid, diesel fuel or any other hazardous waste. Our land based Emergency Response equipment and trained personnel are available 24 hours a day, seven days a week. We own over 150 pieces of specialized cleaning and transportation equipment and employ more than 150 HAZMAT professionals throughout Pennsylvania, New York and New Jersey. We utilize multiple operation centers, enabling us to respond quickly and efficiently, no matter where the situation is located.

Our goal is to minimize clients' liabilities, negotiate with regulators and cost-effectively address every aspect associated with drilling emergencies. In an emergency situation, SCE will always be there to perform all of the necessary response services from clean-up to excavation work to soil and waste disposal. SCE understands that remediation at the physical site, although important and essential, is only part of a complete Emergency Response offering. Additionally, SCE's Emergency Response includes appropriate regulatory coordination and reporting including damage assessment and containment.

Over the past 16 years, we have managed some of the largest emergency response projects in Pennsylvania and New York for our oil and gas clients, including several large scale trucking and pipeline release sites in the Marcellus Shale.

The SCE Advantage

Emergency situations demand competent, professional responses. Trusted as a national emergency response provider, SCE is an experienced, efficient, safe teammate. Our special projects experience includes providing anthrax sampling and decontamination services to the United States Post Office in Washington, DC; recovery and decontamination stations at the World Trade Center site; and mold abatement, construction demolition and debris cleanup after Hurricane Katrina & Sandy. Being a company that the US government turns to in times of crisis, SCE also has over ten years of oil and gas emergency response experience in Pennsylvania and New York.

Our relationship with your company does not simply start and end with Emergency Response Service. SCE provides a wide range of auxiliary gas field services and we believe that prevention is a best practice.

Working with SCE for all of your additional oil and gas construction service needs can help bring our impeccable health and safety record to your business. Whether it's water hauling, waste disposal, or well pad restoration, SCE has the capabilities, experience and equipment to ensure worry-free, safe operation.
