

PROJECT PROFILE - FUEL RELEASE - IMPACTED SOIL

New Providence, Bahamas

2010

At Cable Beach in New Providence, Bahamas, SCE was contracted to perform all field work associated with the cleanup of a 500,000 gallon fuel oil release that occurred on the future home of the \$3.5 Billion Baha Mar MegaResort. It was the largest environmental cleanup ever to be completed in the Bahamas.

SCE was responsible for the excavation, handling, stabilization and re-location of 100,000+ CY of material impacted by the release. SCE constructed large scale LLDPE & HDPE cells for storage and ex-situ treatment, installed 8,370 LF of piping for the installation of an ozone / peroxide injection system, built two 100,000 gallon holding tanks, and performed clearing and grubbing of 6 acres during Phase 1 of this project.

SCE's interaction with the various Consultants, the Bahamian Department of Health & Environmental Safety (DHS), the Government run Hotel Corporation of the Bahamas and the Bahamas Environment Science and Technology (BEST) on a daily basis was critical.

SERVICES PROVIDED

- Soil Remediation
- Ozone / Peroxide System
- Clearing and Grubbing
